The MAILING DATE of this communication appe	ars on the cover sheet with the c	correspondence add	ress			
THE REPLY FILED <u>06 February 2008</u> FAILS TO PLACE THIS						
1. The reply was filed after a final rejection, but prior to or on application, applicant must timely file one of the following application in condition for allowance; (2) a Notice of Apper for Continued Examination (RCE) in compliance with 37 C periods:	replies: (1) an amendment, affidavit eal (with appeal fee) in compliance	t, or other evidence, w with 37 CFR 41.31; or	hich places the (3) a Request			
 a) The period for reply expires 3 months from the mailing date 	of the final rejection.					
The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection. Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO						
	MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).					
Extensions of time may be obtained under 37 CFR 1.136(a). The date have been filed is the date for purposes of determining the period of extunder 37 CFR 1.17(a) is calculated from: (1) the expiration date of the set forth in (b) above, if checked. Any reply received by the Office later may reduce any earned patent term adjustment. See 37 CFR 1.704(b). NOTICE OF APPEAL	ension and the corresponding amount on hortened statutory period for reply origing than three months after the mailing date	of the fee. The appropria nally set in the final Offic	ate extension fee e action; or (2) as

Continuation of 5. Applicant's reply has overcome the following rejection(s): the rejection of claims 1 and 3-8 in view of Ueda et al. and Hong et al. as Hong et al. fails to teach the use of Cu-Co alloy particles.

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that Ueda fails to teach or suggest that any density-intensifying layer is formed on the blackened layer, or that the density-intensifying layer is a chromated layer formed by a chromate treatment. Ueda teaches that the mesh metal (geometric layer) may be covered with a multiple layer structure consisting of two or more layers [0033]. Ueda teaches that a metallic layer may directly cover the mesh metal layer and said metallic layer may be blackened by sulfuration or oxidation treatments [0034]. Said metallic layer may comprise copper [0033]. Ueda further discloses that it is preferred to use a chromate plating layer as the uppermost (exterior) layer [0034]. This serves as the claimed density-intensifying layer. Applicant argues that Ueda fails to teach or suggest modifying its disclosure to arrive at the claimed invention. The motivation to modify Ueda does not have to be derived from Ueda, itself. Instead, Miyake has been relied upon to provide the motivation to modify Ueda. Applicant argues that Miyake does not teach or suggest using any Cu-Co alloy powder adhered to a mesh metal layer as a blackened layer. In combining Ueda and Miyake, Examiner has replaced the Cu metal layer of Ueda with the Cu-Co alloy of Miyake as it provides high corrosion resistance. Kadokura has been relied upon to teach particle size for the blackened layer.
